## Academic Project

- **LangBridge** - Developed a real-time communication platform that instantly translates messages between languages using WebSockets for low-latency interaction. The system includes **translation overlays that display original and translated text together**, providing seamless cross-language communication. Designed with a clean, intuitive interface, LangBridge supports global collaboration, tourism, and cross-cultural connectivity.
- **Scotch** - An ML-based architecture software that converts text prompts into validated 2D/3D building designs. Implemented AI-assisted floor plans, spatial checks, CAD/BIM exports, and integrations with SketchUp, Revit, Rhino, and Blender.
- **Fitness Tracker AI ---** Integrated REST APIs to process user data and deliver personalized insights, reminders, and progress-based recommendations. Technologies: Python, Pandas, NumPy, Scikit-learn, TensorFlow/PyTorch, REST APIs.
